

## Luma Analog Dome Angle Mount

The best multi-purpose camera mount! Offset your dome camera with our low-profile angle mount to get that perfect 90° view straight down the wall. This angle mount compensates for dome limitations by angling the camera so it can look straight down—without installing an arm or more appliances to the wall. It also allows you to mount a dome under an eave in order to keep that wide-angle view. It's the perfect storage space, housing shell, and mount, all in one.
