

70 Volt & 8 ohm Multi Zone Audio System

Legend

- Audio
- Video
- Control
- Power

Notes:

1. First amp handles mixing, mic ducking and level controls for entire system.
2. Master Volume knob on each amp will change level on speakers connected to that amp but not the level going to the other amps.
3. The master volume knob on the 70V amp will control volume to the 70V speakers but will not affect the level going to the amp(s) downstream. The Input Gain (such as Mic or Source) level on the 70V amp can be adjusted and will adjust the level going to the amp(s) downstream.
